

SprinterXPRESS Overview

Your Outsourced Final-Mile Delivery Infrastructure.

Public Commercial Resource | Version 1.0 | September 2026

Why SXP exists

Businesses often discover that adding delivery means adding another operation: vehicles, drivers, insurance, maintenance, scheduling, routing, customer communication, exception handling, technology, and management attention. SprinterXPRESS is building an outsourced final-mile delivery infrastructure model so businesses can access delivery capability without carrying every part of that operating burden internally.

The four pillars

Delivery Capacity: professional transportation capacity aligned with the work.

Operational Coordination: planning, scheduling, execution coordination, and exception handling around the approved requirement.

Customer-Facing Support: communication and delivery care designed around the person receiving the order.

Governed Logistics Intelligence: disciplined delivery decisions guided by standards, safeguards, review, and developing decision intelligence rather than guesswork.

The relationship

Your customer remains your customer. SXP helps you serve them. Your business retains its product, brand promise, commercial relationship, and service expectations while the approved delivery responsibilities are defined around the work.

Technology direction

SmartEngine is the decision-intelligence layer SXP is developing to help organize relevant delivery, capacity, operating, and commercial information so SXP can make more consistent and disciplined decisions. It is under active development and is not represented as a fully autonomous or fully deployed operating system.

SXP doesn't manufacture prices before understanding the work.

This resource is informational. It is not a quote, service acceptance, capacity commitment, contract, or pricing obligation. Specific service commitments are defined through approved scope and written commercial confirmation.
